PRESS INFORMATION

Subject: Workshop for the Conservation and Adaptive Re-use of Urban Heritage in Indonesia (10 - 14 November 2014)

The “**Workshop for the Conservation and Adaptive Re-use of Urban Heritage in Indonesia**” will be organized from **10 - 14 November 2014** in Kotatua, Jakarta. The workshop is being held in collaboration between the Ministry of Education and Culture (MoEC) of the Republic of Indonesia and UNESCO, and will be facilitated by international experts from AusHeritage, as well as the Indonesian Architect Association and the Centre for Indonesian Architectural Documentation.

Background:

Urban heritage is of vital importance for our cities – now and in the future. Tangible and intangible urban heritage are sources of social cohesion, factors of diversity and drivers of creativity, innovation and urban regeneration.

If dealt with properly, urban heritage will act as a catalyst for socio-economic development through tourism, commercial use, and higher land and property values – thereby providing the revenues out of which to pay for maintenance, restoration and rehabilitation.

The importance of the urban heritage in Indonesia:

Indonesia is home to many diverse and multilayered urban heritage places, a reflection of the vibrant multiculturalism of the Nation. There are many opportunities for urban heritage conservation in Indonesia that can bring sustainable benefits to many different people.

However, urban heritage in Indonesia, like many places in Asia and the wider world, faces a significant risk of rapid change through uncontrolled development, abandoned and poorly conserved buildings, and a lack of understanding and awareness about potential adaptive re-use.

Training purpose:

To address these challenges, the MoEC and UNESCO will bring together over 30 participants from heritage cities from all over Indonesia, to undertake training from experts in the field of heritage conservation. Through the training, participants will gain applied and ‘hands on’ skills relating to heritage conservation and particularly adaptive re-use of heritage buildings.

AusHeritage

The training will include the use of a new urban heritage information kit that has been developed by UNESCO and the MoEC in partnership with AusHeritage, the Indonesian Architect Association, and the Centre for Architectural Documentation. This information kit itself gives short, practical and useful information to gain access to heritage resources and support, materials, and basic conservation technique.

The conservation principles presented in the information kit are applicable to culturally significant places across Indonesia and will assist in retaining their unique identity and managing change.

Dr. Harry Widiyanto, (Director, Directorate of Cultural Heritage Conservation and Museums, Ministry of Education and Culture)

“The Ministry of Education and Culture of the Republic of Indonesia has been implementing a range of projects and training throughout Indonesia to safeguard urban heritage. We can see that in many ways urban heritage is the ‘crossroads of public utilization and conservation’, with many opportunities for community engagement in the conservation process. This is why this training that focuses on adaptive-use is so important in giving methods and techniques to ensure that significant heritage is safeguarded, whilst generating new opportunities for public utilization and engaging new generations in the conservation process. “

Mr. Bernards Alens Zako (Head of Culture Unit, UNESCO Office Jakarta)

“As the only United Nations agency with a specific mandate to protect cultural heritage, UNESCO has carried out initiatives to support conservation and revitalisation of various cultural heritage in Indonesia. Through this collaboration with the MoEC, over 30 heritage professionals from throughout Indonesia will gain training in heritage conservation, particularly the adaptive re-use of heritage buildings. We are confident that after this training the participants will be well placed to help unlock the potential and safeguard urban heritage in their own cities.”

Mr. Bambang Eryudhawan (Team Leader, Indonesia Architects Association/Ikatan Arsitek Indonesia)

“This very special workshop is an opportunity for heritage professionals to gain expert training on the adaptive re-use of heritage buildings that can be used in heritage cities through Indonesia. By caring for our heritage we are not only preserving our history, but also creating better living area, supporting tourism, and last but not least, creating jobs and increasing economic value of the city for the benefit of all”.

Mr. Bruce Pettman (Principal Heritage Architect & Team Leader from AusHeritage)

“AusHeritage, Australia's cultural heritage services resource network in the region, is very pleased to be involved with this important training workshop for heritage professionals from throughout Indonesia. Our participation and collaboration with the MoEC (Ministry of Educations and Culture), UNESCO, IAI (Indonesia Architects Association), PDA (Centre for Indonesian Architectural Documentation) will collectively build professional capacities to protect and utilise culturally significant urban heritage areas, traditional practises and community activities for the benefit of all. Good conservation and revitalisation can be mutually beneficial and provide sustainable opportunities for communities and for cultural tourism. This workshop will cover the processes of managing change of significant heritage buildings through both sensitive and innovative adaptive re-use and also their equally important ongoing management and maintenance into the future.”
